

## Dosages Consistent with Clinical Research

Not all formulas on the market use meaningful dosages of key ingredients. What sets QOL Labs' formulas apart is that we take only clinically researched ingredients for specific health conditions and formulate them into products consistent with suggested dosages.

Ingredient	Daily Dose Used in Human Studies	Daily Dose Used in ImmunoKinoko®s
AHCC®	1,000–3,000 mg	1,500–3,000 mg

<sup>s</sup>Serving size: 2 vegicaps, or 3 scoops • Daily dose: 2–6 vegicaps, or 3 scoops

ImmunoKinoko® 500, 750

## Supplement Facts

Serving Size: 2 Capsules

Servings Per Bottle: 45–30

Amount Per Serving	% Daily Value
<b>AHCC®</b> Proprietary Blend (Active Hexose Correlated Compound)	1000–1500 mg †
Mycelia extract of hybridized basidiomycetes ( <i>Lentinula edodes</i> ) mushrooms (with acetylated alpha-glucans), candelilla wax (plant), dextrin (tapioca), cellulose (plant), alpha-cyclodextrin (vegetable)	

ImmunoKinoko® 1000

## ImmunoKinoko 1000

Serving Size: 3 Scoops

Servings Per Jar: 15

Amount Per Serving	% Daily Value
<b>AHCC®</b> Proprietary Blend (Active Hexose Correlated Compound)	3000 mg †
Mycelia extract of hybridized basidiomycetes ( <i>Lentinula edodes</i> ) mushrooms (with acetylated alpha-glucans), candelilla wax (plant), dextrin (tapioca), cellulose (plant), alpha-cyclodextrin (vegetable)	

This product is suitable for vegetarians and gluten-free.

### Our Commitment to Clinical Efficacy

Every ingredient validated by human studies.  
Every dosage consistent with clinical research.  
No exceptions. No compromises.

# ImmunoKinoko®

QOL LABS®

Active Hexose  
Correlated Compound  
(AHCC®)

Significantly improves immune response\*  
Enhances function of NK cells, DC cells,  
T-cells, Macrophages and Cytokines\*

\* These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

Many people turn to alternative and complementary therapies when dealing with immune challenges. But with so many different choices, all claiming to be the best, it can be hard to separate the scientifically validated products from the fads.

If you or your loved ones are looking for one of the most extensively researched, highly efficacious, 100 percent natural supplements for strengthening immunity, you need to know about Active Hexose Correlated Compound (AHCC®).\*

## AHCC Is:

- The world's most researched specialty immune supplement, supported by over 20 human clinical studies\*
- A highly effective immune modulator used in over 1,000 medical clinics worldwide\*
- The subject of research at respected medical institutions, including Yale Medical School, MD Anderson, and UC Davis
- Japan's top-selling immune-supporting specialty dietary supplement\*
- The daily immune supplement for tens of thousands of people around the world\*
- Known for safety, as demonstrated by in vivo safety studies and 20 years of use\*

“AHCC is the one of the most researched natural compounds that I have ever come across. Human clinical studies published in prestigious peer-reviewed journals lead to the unequivocal conclusion that AHCC is highly efficacious.”

**Dr. Fred Pescatore, M.D.**  
Centers for Integrative  
and Complementary Medicine

## About AHCC

AHCC is an extract obtained from a hybridization of several subspecies of mushroom mycelia (roots).

Scientists have known for some time that certain species of mushrooms contain constituents called polysaccharides, which exert beneficial effects on immune cells in test tube models. However, at a molecular weight of more than 200,000 daltons, mushroom polysaccharides are too large to be absorbed efficiently by the human body. AHCC is manufactured through a patented process that reduces its molecular size to under 5,000 daltons — increasing absorption and efficacy.

## Award-Winning Efficacy

Quality of Life Labs is the proud recipient of the Nutracon Best New Product of the Year award for AHCC, a testament to its solid scientific research and proven efficacy.

## How AHCC Works

AHCC is a biological response modifier, which means it turns the dial up on your natural immune response.\*

Several clinical trials — including a 269-subject study published in the prestigious *Journal of Hepatology* and a recent study at Yale Medical School on healthy elderly patients — have shown that AHCC can significantly increase the activity of certain white blood cells, whose job is to defend the body against foreign substances.\*

Specifically, AHCC has been shown to increase:

- **NK cell activity by as much as 300–800%.\***  
Natural killer (NK) cells are the immune system's first line of defense.
- **Levels of T cells by as much as 200%.\***  
As part of the secondary immune response, T cells provide backup to NK cells.
- **Populations of macrophages, in some cases doubling them.\***  
Macrophages engulf and ingest foreign particles and cellular debris.
- **Production of cytokines.\***  
Cytokines are chemical messengers that help white blood cells communicate and coordinate an immune response.
- **Number of DC cells.\***  
DC cells provide defense in tissues exposed to the exterior environment.

## ImmunoKinoko® AHCC Products from QOL Labs

### ImmunoKinoko 500 (capsules)

Delivers 500 mg of AHCC per capsule, providing the suggested daily therapeutic dosage in 6 pills.

### ImmunoKinoko 750 (capsules)

Delivers 750 mg of AHCC per capsule, providing the suggested daily therapeutic dosage in 4 pills.

### ImmunoKinoko 1000 (powder)

Delivers 3,000 mg of AHCC per serving, providing the suggested daily therapeutic dosage in 3 small scoops.
